Online Store *Performance* Analysis

Period: January 2024 – June 2026

Presented by
Proh Zindove

Executive Summary

R2.98m

valid revenue from 42,552 completed-and-paid orders; Average Order Value (AOV) R69.95.

Electronics leads category revenue at R1.51m, while Accessories leads unit volume at 29,876 units volume and revenue leaders are not the same.

Tehran generated the highest revenue at approximately R819,587.45.
Regular customer is more valuable, contributing 55.5% revenue

Higher discounts do not materially increase basket size: average quantity stays around 1.87–1.90 units while average order revenue falls from R74.64 at 0% discount to R56.10 at 30%.

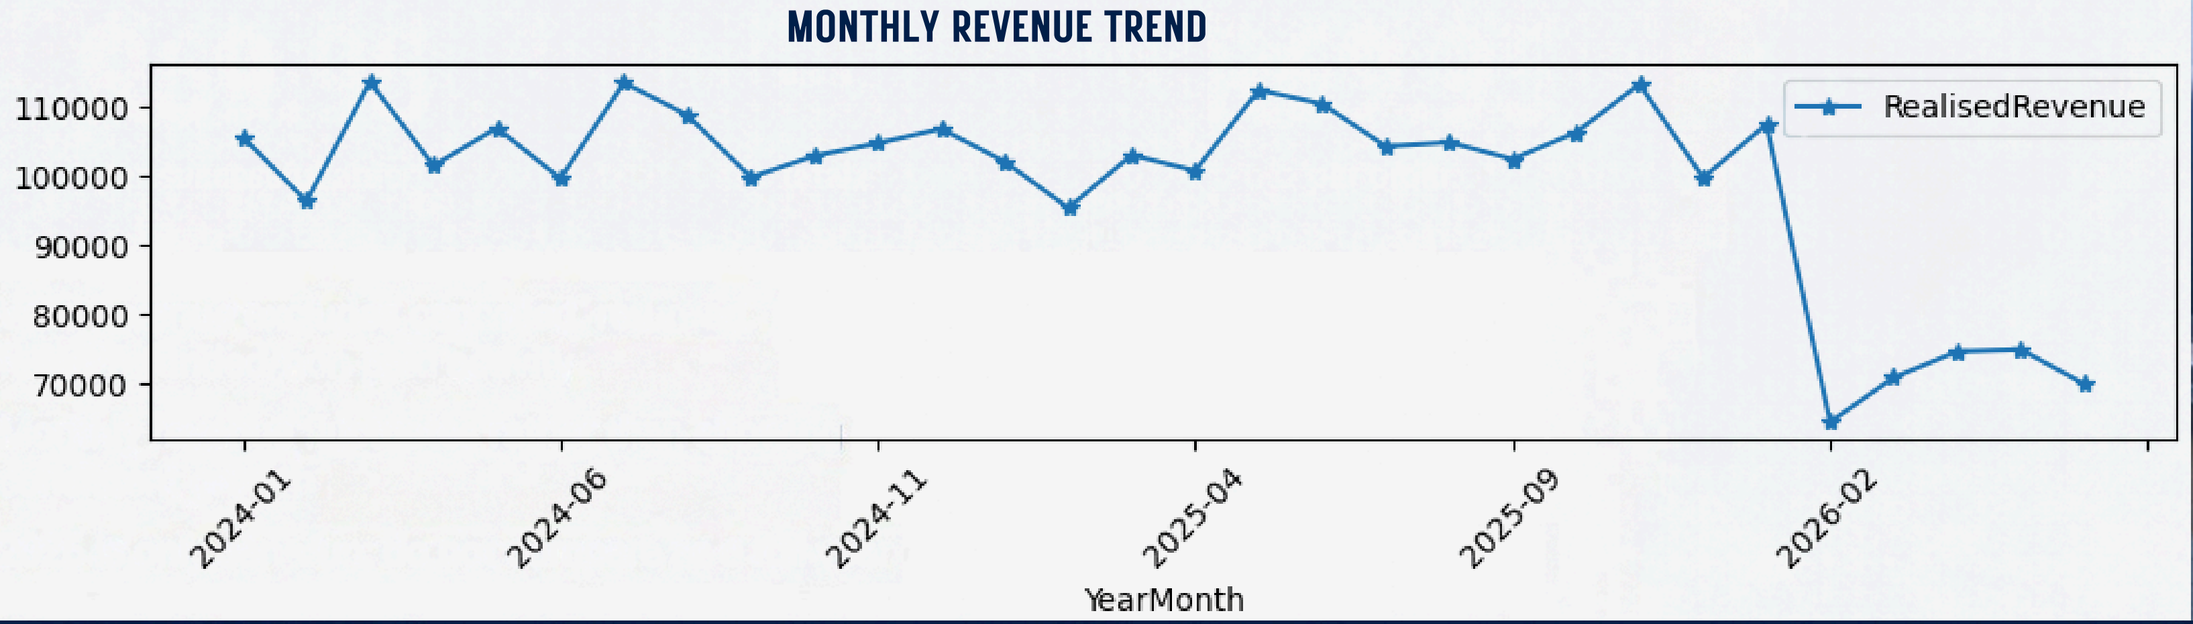

Revenue Performance

REALISED REVENUE
R2,976492, 65

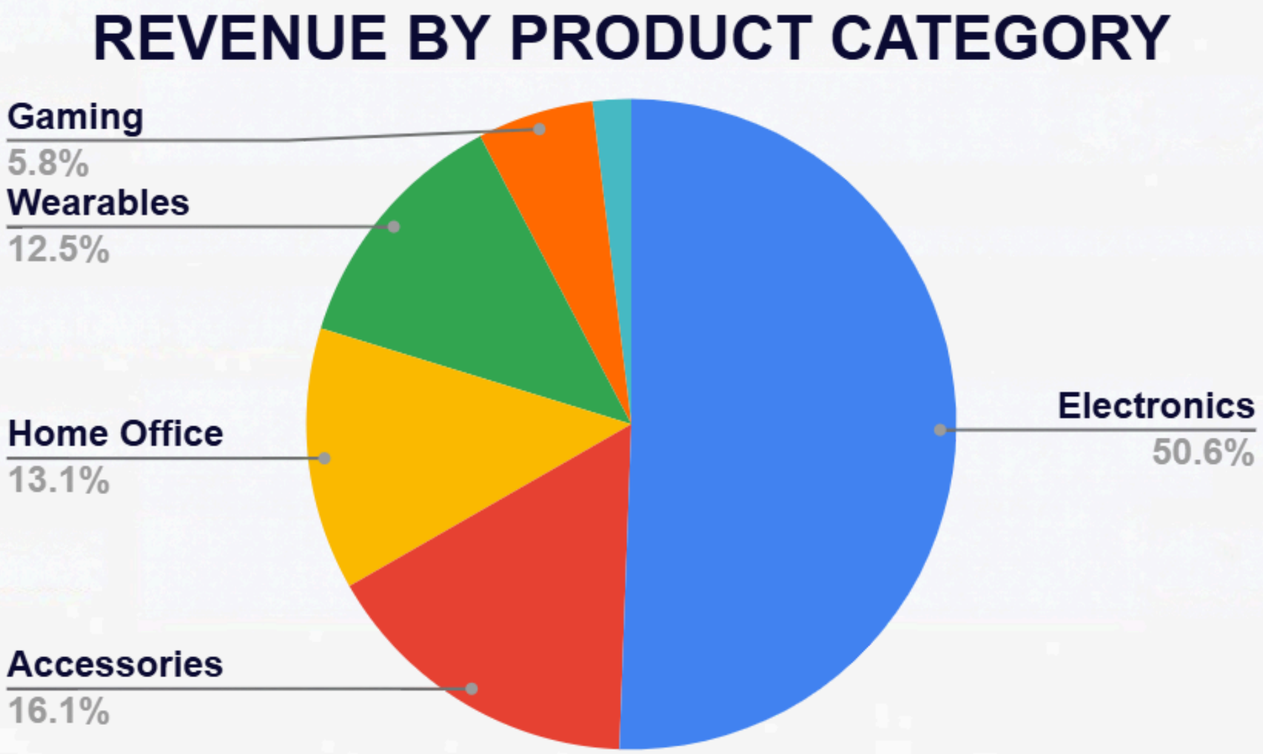

VALID ORDERS
42, 551

AVERAGE ORDER VALUE
R69.95

The business has a R69.95 revenue baseline per successful order, so growth must come from more successful orders and/or higher basket value. Realised revenue and valid orders excludes cancelled, returned, failed, refunded, and non-paid orders. Realised revenue remained relatively stable throughout 2024 and 2025, with peaks of approximately R110,000, before declining sharply to below R70,000 in early 2026. The business should investigate the causes of this downturn and replicate strategies from high-performing months to restore revenue growth.

Product Performance By Revenue

TOP PRODUCTS BY REVENUE

Headphones

R291,187.50

Office Chair

R287,361

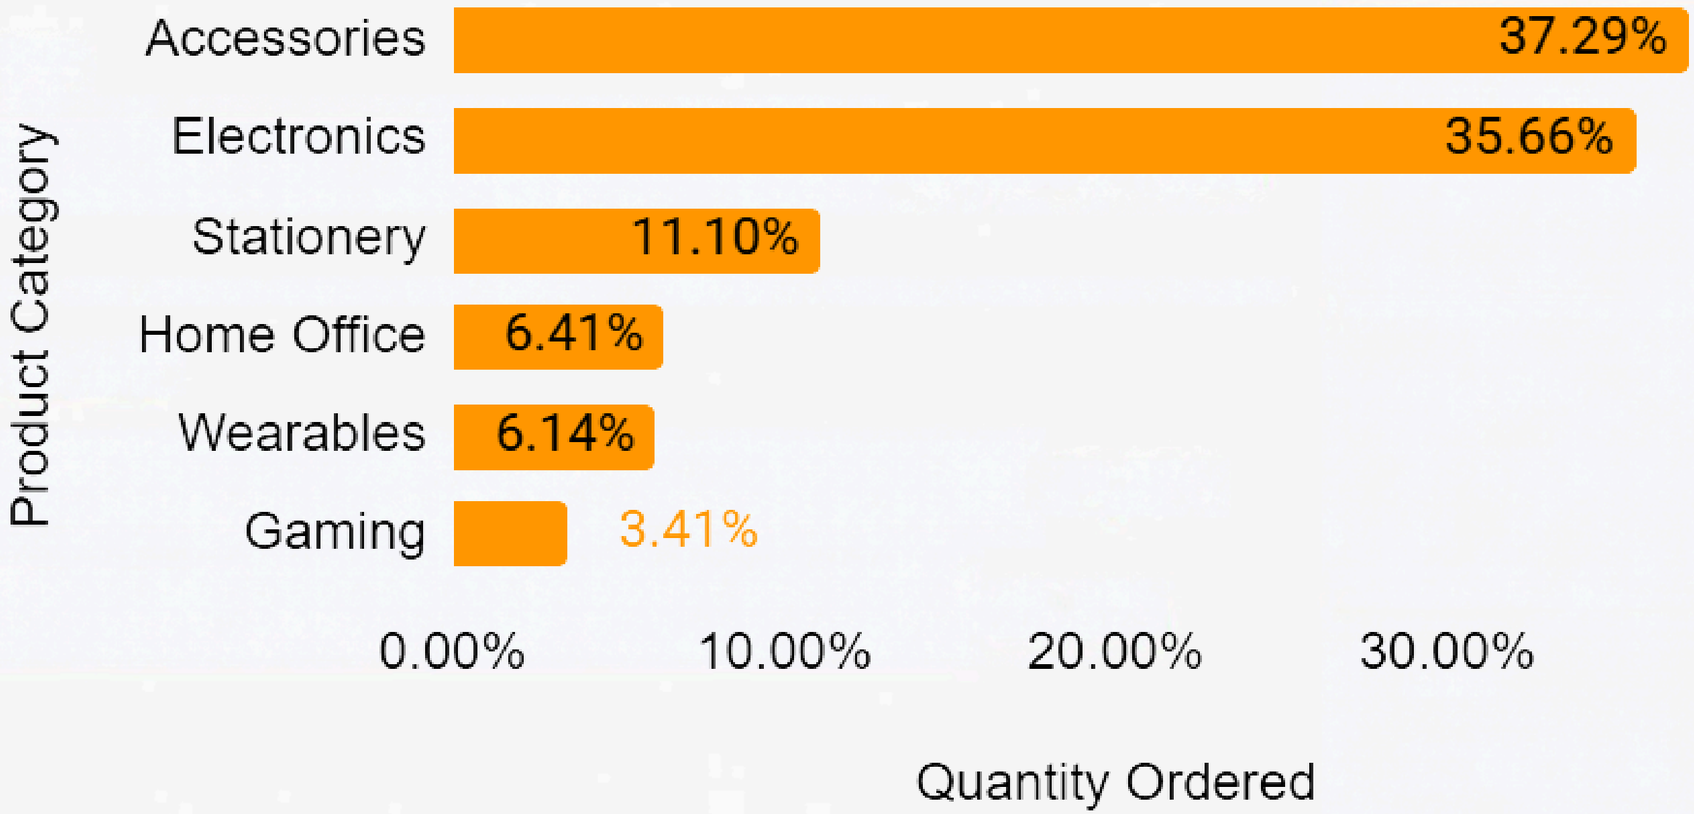

Tablet

R243,269

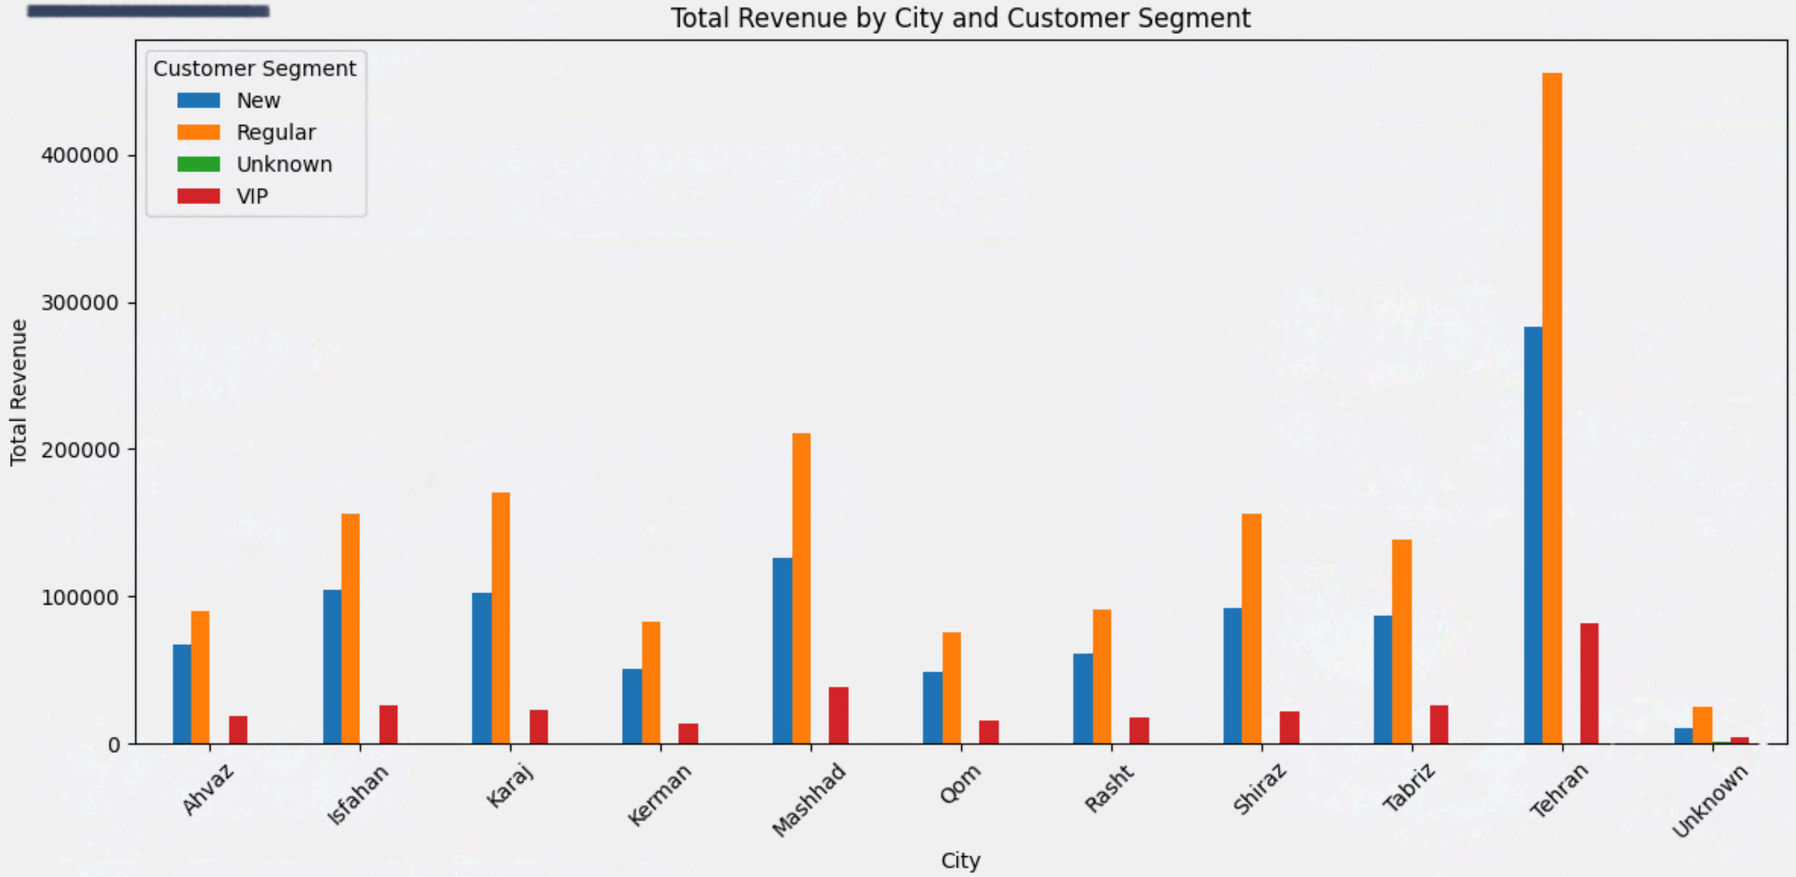

Electronics is the main revenue driver, contributing 50.6% of total revenue. Despite high order volumes, Accessories contribute only 16.1%, suggesting lower-value products. Prioritise Electronics for revenue growth while exploring upselling and cross-selling opportunities in Accessories. High sales volume does not automatically mean high revenue, so range and stock decisions should consider both units and revenue.

Product Ordered By Category

Accessories and Electronics dominate demand, contributing about 73% of total quantity ordered. Prioritise stock availability for these high-demand categories to prevent lost sales. Review pricing, promotions and product mix for lower-demand categories to improve performance.

Where Customer Value Comes From

TOP CITY BY REVENUE

Tehran

R819,587.45

TOP SEGMENT BY REVENUE

Regular

R1,652,359.85

Tehran city and regular customers account for the largest revenue pools, but total segment revenue should not be confused with revenue per individual customer. The shop should prioritise marketing and retention of Regular customers in the top five cities while converting New customers through welcome offers. It should also review VIP membership criteria to understand and address the low number of VIP customers.

Revenue Leakage

CANCELLED ORDERS	RETURN ORDERS	FAILURE PAYMENTS
4.94%	3.07%	3.87%

PAYMENT FAILURE RATES

Card To Card	Gateway	Wallet	Cash
3.90%	3.89%	3.87%	3.66%

Leakage is spread across the order journey rather than being driven by one payment method. Operational causes should be investigated across cancellations, returns and payment failures. However, there is no urgent need to change payment method offerings as failure rates are stable.

Discounts Are Not Increasing Basket Size

DISCOUNT LEVEL	0%	5%	10%	15%	20%	30%
AVERAGE QUANTITY	1.87	1.90	1.89	1.88	1.87	1.88
AVERAGE ORDER REVENUE	R74.64	R71.56	R68.86	R64.93	R61.30	R56.10

Larger discounts reduce revenue per successful order without a meaningful increase in units purchased. The business should therefore use modest discounts (around 0.05) to encourage higher order sizes. Avoid deep discounts except for clearance, since they mostly cut revenue without driving bigger purchases.

Recommendations

1

Reduce order leakage

Investigate the causes behind 4.94% cancellations, 3.07% returns and 3.87% failed payments; no single payment method stands out as the main failure source.

2

Protect high-value demand

Prioritize availability and merchandising around Electronics (R1.51m revenue) and high-volume Accessories (29,876 units), while tracking both revenue and units.

3

Utilise customer retention strategies

Tehran is an important revenue-generating market and may deserve particular attention in marketing and customer-retention activities.

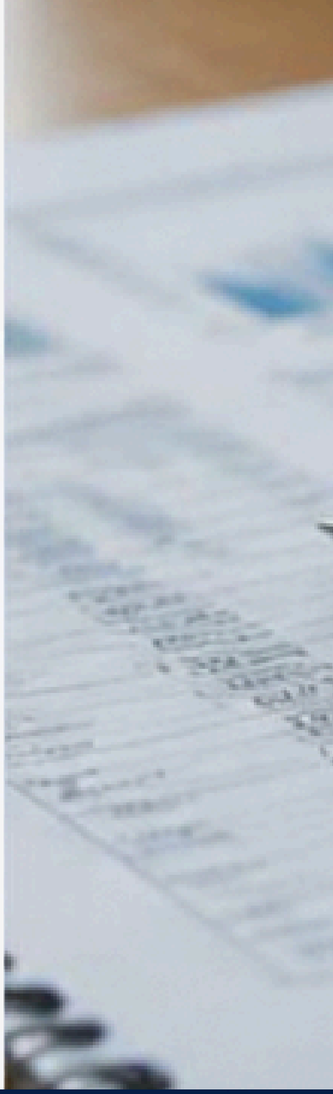

4

Review discount strategy

Test targeted offers instead of broad deep discounts; basket size stays =1.87–1.90 while AOV falls to R56.10 at 30%.

Data Quality Issues & Handling

- Four datasets were cleaned and joined after cleaning for analysis.
- Duplicates were identified and removed.
- Missing categorical values were replaced with “Unknown”, numerical values with the median, and records with missing critical dates were removed.
- Missing values resulting from the joins were retained to avoid data misrepresentation.
- Incorrect data types were corrected to date, integer, or float formats.
- Data consistency was checked before and after joining.
- Actual Revenue was defined as realised revenue and used for analysis.

IMPACT OF DATA CLEANING

R502,273.20 change in revenue when excluding invalid orders (14.44%).

49 965 retained rows in the final table
